## Gameplay Design & Prototyping | Godot, Unity and Interactive AI

Shanghai, China (UTC+8) | Open to remote work and relocation | luye20010831@gmail.com

Latest project: Qingqiu Boss Combat - demo video and project notes

GitHub: https://github.com/luye20010831-commits/qingqiu-combat-demo

Independent game creator since 2025, with **one Steam Early Access release and one public demo**. I own gameplay rules, player interaction, art direction, engine integration and testing, using AI-assisted implementation to bring designs into playable builds.

### INDEPENDENT GAME DEVELOPMENT | JAN 2025 - PRESENT

#### Qingqiu - Three-Phase Boss Combat

Nov 2026 | Godot / GDScript | Packaged test demo; scripted engine capture | Demo video and project notes

- Designed Boss skills, phase behaviours, barrage density and counterplay around tracking charm, shields, ranged fire and circular patterns; directed revisions based on playtest feedback.
- Led visual direction and iteration decisions. Used AI assistance for code, assets, shaders, skeletal export and integration, taking the design to a runnable test build.

#### Legacy of Ancestors

Unity / C#, Godot / C# migration | Steam Early Access | Steam

- Designed a nine-era life sim linking partners, heirs, inherited traits and appearance, and assets. Built a test-agent workflow that simulates player actions and records state for progression and save/load regression.
- Prototyped local-LLM dialogue grounded in game state, with structured outputs and game-rule validation of proposed actions; checked duplicate submissions, stale responses and offline handling.

#### Malatang Simulator

Godot / GDScript | Current main project, 3D restaurant simulation

- Designed preparation, weighing, payment, cooking, handoff and settlement. Held items, orders and inventory govern valid actions; used reproducible playthroughs and daily records to check waiting, stockouts and the operating loop.

#### Isekai Hotpot: Cozy Restaurant Sim

Godot / C# | Public Steam demo | Steam demo

- Connected purchasing, preparation, service and settlement with character progression, calendar events, decor effects and upkeep. Integrated customization, art and onboarding.

#### Yokai Night Parade - 3D Wave Survival

Godot / GDScript | Wave combat and between-wave builds | Playable demo | GitHub / Windows demo

- Built a playable prototype around class-directed attacks, wave progression and between-wave upgrades, integrating combat feedback, shared co-op progress and individual builds.

### TOOLS AND OTHER WORK

**Godot (GDScript, C#), Unity (C#), Spine, Tripo and ComfyUI.** Built reusable image-generation and compositing workflows, retaining settings and execution records.

Other work: browser life-sim and shopkeeper-negotiation prototypes. Contributed primarily game art to a two-player Game Jam project.

### EDUCATION, EARLIER WORK AND LANGUAGES

**Ritsumeikan University, College of Letters** | BA | Apr 2020 - Mar 2024
Japanese Literature Studies; Japanese Language and Information Studies specialization.

**BELLSYSTEM24, Japan** | Graduate trainee, CRM operations for an NTT client | Mar - Dec 2024

Mandarin native | Japanese near-native, above business level | English conversational, able to join meetings
